

5.9

• Annuités de début de période

• $i = 0,02$ $V_{cd} = 15'000$ frs $n = 10 \cdot 4 = 40$

1) $A = ?$

$$V_{cd} = \frac{A(1+i)[(1+i)^n - 1]}{i}$$

$$\Rightarrow 15'000 = \frac{A \cdot 1,02 (1,02^{40} - 1)}{0,02} \quad | \cdot 0,02$$

$$300 = A \cdot 1,02 (1,02^{40} - 1) \quad | : 1,02 (1,02^{40} - 1)$$

$$A \cong 243,47$$

Rep. $A = 243,47$ frs.

2) garanti en intérêts? (= 15'000 - montant placé)

$$15'000 - 243,47 \cdot 40 = 15'000 - 9'738,80 = 5'261,20$$

Rep. 5'261,20 frs.

3) $V_{Ad} = ?$

$$V_{cd} = V_{Ad} \cdot (1+i)^n$$

$$15'000 = V_{Ad} \cdot 1,02^{40} \quad | : 1,02^{40}$$

$$V_{Ad} = \frac{15'000}{1,02^{40}} \cong 6'793,36$$

Rep. $V_{Ad} = 6'793,36$ frs.
